## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-3, 5-8, and 27 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 5-7, and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Takahashi (2002/0186736).

With respect to claims 1 and 27, Fig. 15B disclose a tunable laser source comprising a widely tunable semiconductor laser M comprised of an active region 14 including multiple quantum wells (MQWs) grown on top of a thick, low bandgap, single common waveguide layer 19, wherein both the waveguide layer and the active region are fabricated between a p-doped region and an n-doped region; and

an electro-absorption modulator N integrated into the semiconductor laser, wherein the electro-absorption modulator does not include quantum wells (QWs) and instead uses Franz-Keldysh effects for modulation (as admitted in the amended specification field on 01/17/06,

Art Unit: 2828

when using Franz- Keldysh effects means that the electro-absorption modulator does not include quantum wells), the electro-absorption modulator shares the waveguide layer with the semiconductor laser, and the waveguide layer is designed to provide high index tuning efficiency in the laser and good reverse bias extinction in the modulator (para.0011-0012).

With respect to claim 5, Fig.15B and para.0008 disclose the waveguide layer is a buried heterostructure waveguide and the MQWs include offset MQWs (ten periods of well layers).

With respect to claim 6, para.0008 and 103 disclose the waveguide layer is a ridge waveguide and the MQWs include offset MQWs (ten periods of well layers).

With respect to claim 7, Fig.15C shows a blocking junction 25.

### ***Allowable Subject Matter***

Claims 2-3 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
